## Experience

---

### DentalQore

Full Stack Developer

Oct '22 - Mar '24

- Made substantial contributions to the frontend and backend of a large web based application, used by Dentists across the country to manage their practice. And internal applications for employee use to view client analytics and speed up development processes.
- Created and updated APIs to handle client/patient communication, forms, and client/patient data.
- Translated Figma designs into dynamic, responsive layouts. The pages often contained a lot of functionality, stateful logic, and data displayed through progressive disclosure with an emphasis on UX.
- Solved bugs reported by support teams in the frontend and backend.
- Built an internal content editor with AI generation abilities and functionality to format and export the HTML into a WordPress compatible XML file. This was able to save team members hours of time through the website development process.
- Integrated an A2P compliant texting service that sends and receives thousands of messages per day. This required large refactors to the backend and close collaboration with other team members to ensure a smooth transition for our clients.
- Optimized SQL queries for performance. In some cases having 100 - 600% decreases in run time.

### DentalQore

App Support

Jun '22 - Oct '22

- Managed client bug reports, feedback, and requests relating to the client facing application through phone and email.
- Would troubleshoot and report bugs to the development team, making sure to give detailed descriptions on how to repeat and test them.
- Communicated with executives in meetings on prioritizing bugs, areas of improvement, and client feedback.
- Wrote documentation on common procedures and best troubleshooting practices for the department.

### DentalQore

Tech Support

Feb '22 - Jun '22

- Added and refactored web pages for clients based on their requests.
- Common tasks were updating the design of a page or global components such as the header or footer, creating image galleries, fixing bugs, and adding contact forms.
- Handled phone calls and emails from clients in a friendly and patient manner.
